

Precise and beautiful?

EVAL™ EVOH for IML and coinjection

IML (in mould labels) - the advantages of over-moulding

- Makes possible extremely precise barrier layer thickness and packaging design.
- Allows eye-catching graphics or transparency on all surfaces
- Undentable, unbreakable, light weight.
- Efficient aseptic fill or batch retort.
- Safety in use. Extended freshness and shelf life.

Add superior barrier properties to food containers with coinjection

- With 10,000x the oxygen barrier of LDPE, EVAL™ provides barrier function with just a few µm.
- EVAL™ also blocks outside contamination like odours and MOSH/MOAH mineral oils that can migrate from cartonboard packaging.
- Suitable even for highly technical pieces like screw caps and coffee pods.
- Inject grips and threads for reclosable containers.

High barrier with high-quality graphics
